Function 1

$$F_{\text{ex}}^2(Q) = e^{-Q/Q_0}.$$

Here Q is the recoil energy transferred to the target nucleus,

$$Q_0 = \frac{1.5}{m_N R_0^2}$$

is the nuclear coherence energy and

$$R_0 = \left[0.3 + 0.91 \left(\frac{m_N}{\text{GeV}} \right)^{1/3} \right] \text{ fm}$$

is the radius of the nucleus.

```

[Top](#)

Start Program

Check the above setup

[Start](#)

[Modify and re-submit](#)

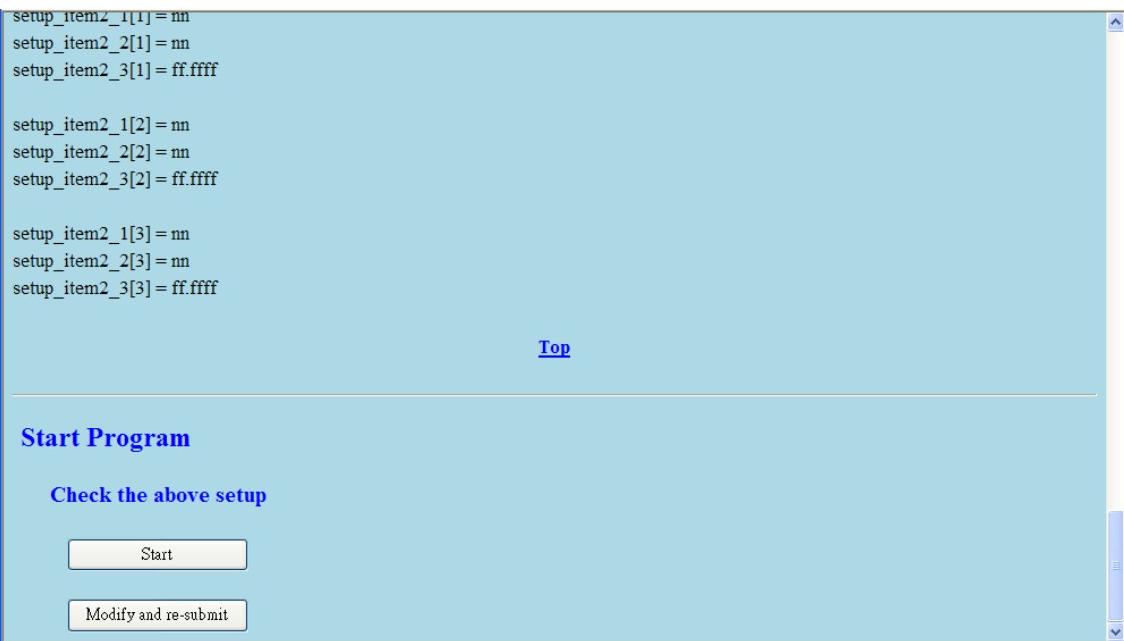

The image shows a software window with a light blue background. In the top-left corner, there is a code editor containing three sets of assignments for variables setup_item2_1, setup_item2_2, and setup_item2_3, each with values nn or ff.ffff. Below the code editor is a horizontal line with the word "Top" underlined in blue. A thin horizontal line separates the code from a section titled "Start Program". Under "Start Program", there is a bolded instruction "Check the above setup". Below this are two buttons: "Start" and "Modify and re-submit". On the right side of the window, there is a vertical toolbar with icons for file operations like Open, Save, and Print, along with a checkmark icon.

    default:  
        return 0;  
    }  
}  
while (!feof(personal_setup));
```

Appendix B

Basic Commands for Website Building

In this chapter I give some basic and frequently used commands for building a website. Full website building tutorials with more detailed explanations and interactive examples can be found in Ref. [1]. Two validator links for validating the HTML and CSS syntax of a web page are also given in Ref. [2].

B.1 HTML (Hyper Text Markup Language) and XHTML (EXtensible HTML)

B.1.1 html

Script

```
<!DOCTYPE html
PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">

<html xmlns="http://www.w3.org/1999/xhtml">

<head>
.
.
.

</head>

<body>
.
.
.

</body>

</html>
```

Modification

```
<!DOCTYPE html
PUBLIC "-//W3C//DTD XHTML 1.0 Transitional//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-transitional.dtd">
```

Modification

```
<!DOCTYPE html
PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
```

B.1.2 head

Script

```
<head>

<title> Title of the web page </title>

<meta id="author" content="name(s) of author(s)" />
<meta http-equiv="Content-Type" content="text/html; charset=utf-8" />
<meta http-equiv="Refresh" content="15; url='www.xxxxxxx.xxx/xxxxxx/'" />

<link rel="stylesheet" type="text/css"
      href="folder of the css file/name of the css file.css" /> See Sec. B.2 for CSS

<base href="http://www.xxxxxxx.xxx/xxxxxx/" />
<base target="_top" /> See Sec. B.1.8 for links

<style type="text/css">
    .
    .
    . See Sec. B.2 for CSS
    .
    .
    .

</style>

<script type="text/javascript">
    .
    .
    . See Sec. B.3 for JavaScript
    .
    .

</script>

</head>
```

Modification

```
<meta http-equiv="Content-Type" content="text/html; charset=big5" />
```

Modification

```
<base target="_blank" />
```

Corresponding command for <base> in <body>

```
<a href="http:>Description of this link</a>
```

B.1.3 Comments

Script

```
<!-- Comment line -->  
  
<!--  
Some comments ...  
. . .  
-->
```

See Secs. B.2.1, B.3.2, and B.5.2 for comments in CSS, JavaScript, and PHP, respectively.

B.1.4 Tags and elements

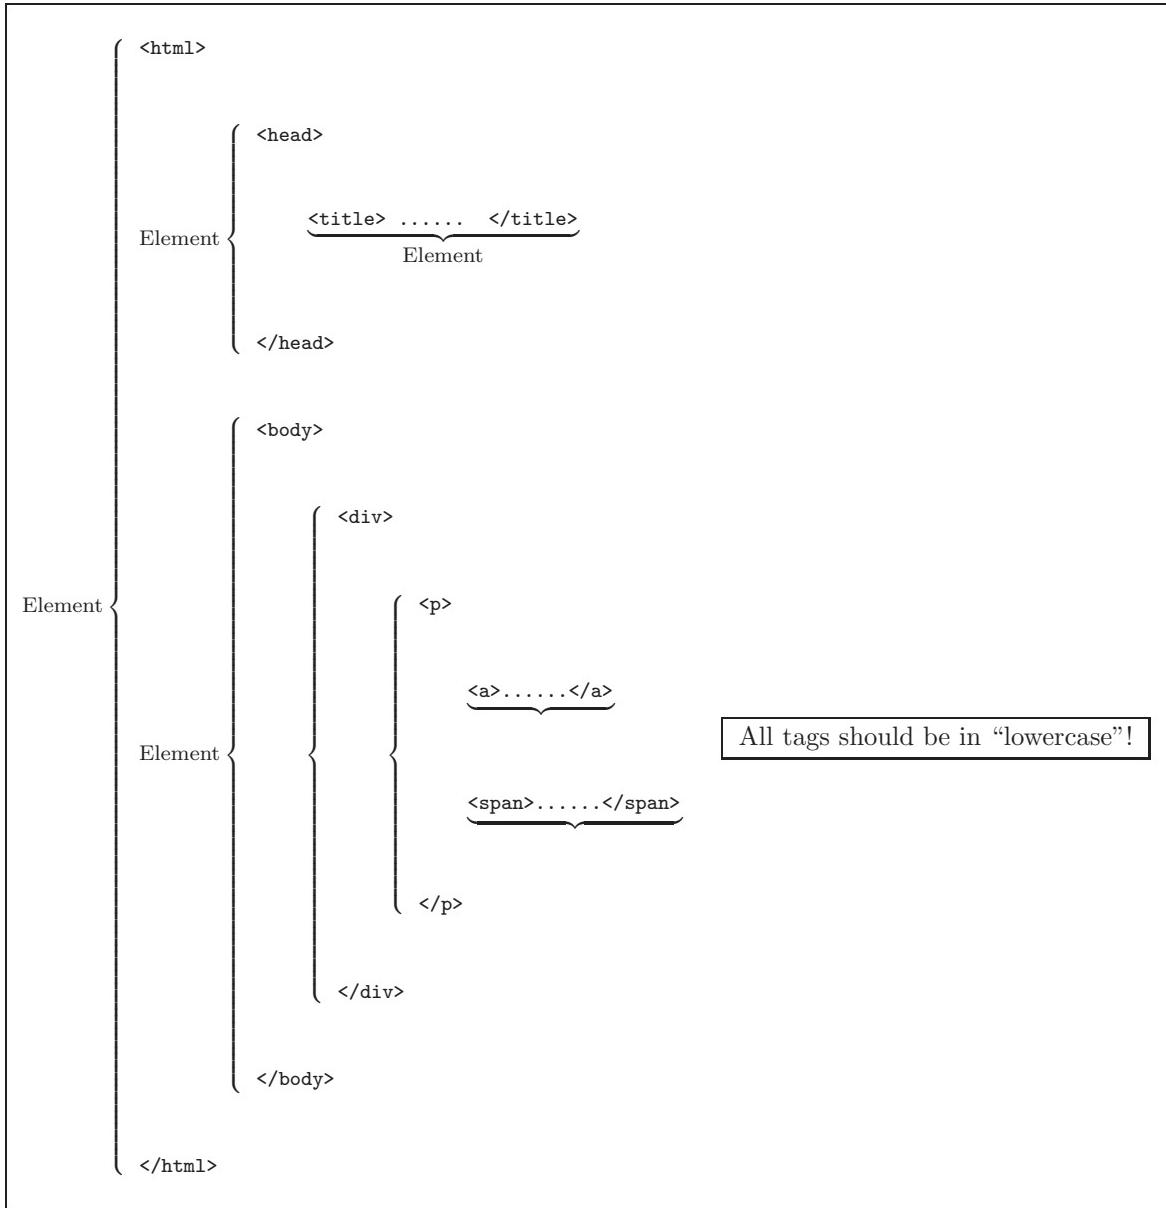

Start/opening tags

```
<html>, <head>, <body>,
<title>, <div>, <p>, <a>,
<span>
```

End/closing tags

```
</html>, </head>, </body>,
</title>, </div>, </p>, </a>,
</span>
```

Elements

See Sec. B.4.1 for the definitions of a “node” and the “node tree” in HTML DOM.

Empty elements (without closing tags)

```
<meta />, <link />,
<br />, <hr />, <img />, <input />,
<area />, <col />, <frame />
```

B.1.5 Attributes

Script

```
<tag type="type choice of this tag"  
      id="id of this tag"  
      name="name of this tag"  
      value="value given for this tag"  
      class="specified class (for this tag)"  
      style="specified style for this tag"  
      (/) >
```

Both single ('...') or double ("...") quotes can be used.

All attributes should be in "lowercase"!

See Sec. B.2 for CSS

See Secs. B.1.8, B.1.9, and B.1.12 for some specified attributes combined with the `<a>`, the ``, and the `<input type="radio">`, the `<input type="checkbox">` as well as with the `<option>` tags.

B.1.6 Headings

Script

```
<body>

<h1> Main Title of the Website </h1>

<h2> Title of the web page </h2>

<hr />

<h3> Main title of the category </h3>
<h4> Title of blocks in the category </h4>

<hr />

<h5> Title of the section </h5>

<div>

<h6> Title of the paragraph </h6>

<p>
    Some sentences ... <br />
    Some sentences ... <br />

    <span> Some sentences ... </span>
</p>

<hr />

</div>

</body>
```

B.1.7 Text formatting

Bold face

```
<b> Bold face </b>
<strong> Bold face </strong>
```

Italic

```
<i> Italic </i>
<em> Italic </em>
```

Resize

```
<big> Text with a bigger font size </big>
<small> Text with a smaller font size </small>
```

Super-/Subscript

```
x<sup>n</sup>           ==>      xn
x<sub>n</sub>           ==>      xn
```

Inserted and deleted texts

```
<ins> XXXXXX </ins>           ==>      XXXXXX
<del> XXXXXX </del>           ==>      XXXXXX
```

Acronym and abbreviations

```
<acronym title="complete words for the acronym"> An acronym </acronym>
<abbr title="complete words for the abbreviation"> An abbreviation </abbr>
```

Preformatted text

```
<pre>
  Some script ...
  Some script with a larger indent...
  Some script with the largest indent...
</pre>
```

Some script ... Some script with a larger indent... Some script with the largest indent...	==> Some script ... Some script with a larger indent... Some script with the largest indent...
--------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------

B.1.8 Links and the anchor a

Script

```
<a href="http://www.xxxxxx.xxx/yyyyyy/xxxxxx/xxx.html"
    href=".. /xxxxxx/xxx.html"
    href=".. /xxxxxx/xxx.html#xxxxxx"
    href="#xxxxxx"

    target="_top/_blank">
    Description of this link .....
```

Link for sending e-mails

```
<a href="mailto:xxxxxx@xxxxxx.xxx.xx?
    cc=yyyyyy@yyyyyy.yyy.yy&
    bcc=zzzzzz@zzzzzz.zzz.zz&
    subject=.....%20.....%20.....&
    body=text of the e-mail">
    Send e-mail to some body</a>
```

See Sec. B.5.11 for e-mail sending in PHP.

B.1.9 img

Script

```

```

Script

```

<map name="name of the used map">

  <area shape="rect/circle"
        coords="x_1,y_1,x_2,y_2/x_0,y_0,r"
        href="....."
        />

</map>
```

Link with an image

```
<a href="..//xxxxxx/xxxxxx.jpg"
    target="_blank">
  <a>
```

Link for sending e-mails with an envelope icon

```
<a href="mailto:xxxxxx@xxxxxx.xxx.xx?
  cc=yyyyyy@yyyyyy.yyy.yy&
  bcc=zzzzzz@zzzzzz.zzz.zz&
  subject=.....%20.....%20.....&
  body=text of the e-mail">
  </a>
```

B.1.10 Lists ol, ul and li

Ordered list

```
<ol type="1/A/a/I/i">  
  
    <li> .....  
    </li>  
    <li> .....  
    </li>  
  
</ol>
```

Unordered list

```
<ul type="disc/circle/square">  
  
    <li> .....  
    </li>  
    <li> .....  
    </li>  
  
</ul>
```

B.1.11 form and fieldset

Script

```
<form>

    <fieldset>
        <legend> Title of this input field </legend>
        .
        .
        .

    </fieldset>

    <fieldset>
        .
        .
        .

    </fieldset>

</form>
```

See Sec. B.5.8 for the complete script for `<form>` tag.

B.1.12 input, select, and textarea

Script

```
<input type="text"  
      type="password"  
  
      type="radio"    (checked) (disabled)  
      type="checkbox" (checked) (disabled)  
  
      type="file"          See Secs. B.5.9 and B.5.10 for file handling and uploading  
  
      type="button"   value="Yes!"  
      type="image"     src="../xxxxxx/yyyyyy.jpg"          See Sec. B.1.9  
  
      type="submit"   value="Submit"  
      type="reset"    value="Reset"  
  
      type="hidden"  
      />
```

Script

```
<select name="the name of this selection">  
  
  <optgroup label="label for this category">  
  
    <option value="the value of this option" (selected)>  
      the value of this option  
    </option>  
  
    <option value="the value of this option">  
      the value of this option  
    </option>  
  
  </optgroup>  
  
  <optgroup label="label for this category">  
  
    <option value="the value of this option" (selected)>  
      the value of this option  
    </option>  
  
  </optgroup>  
  
</select>
```

Script

```
<textarea>  
  Some text ...  
  .  
  .  
  .  
</textarea>
```

Script

```
<label for="the id of the specified item">  
  Some text/Description of the specified item  
</label>  
  
<input id="an id for this item" />
```

B.1.13 table

Script

```
<table border="width of the border of the tabel"
       cellspacing="distance between two cells"
       cellpadding="distance between the inner border of the cell and the text"

       frame="border/box"
         "void"
         "above/below"
         "hsides/vsides"

```

Defining attribute values for one or more columns

```
<col style="style definitions" />  
  
<colgroup span="number of columns" style="style definitions">  
</colgroup>
```

Grouping content in one or more rows

```
<head>  
  
    <style type="text/css">  
  
        thead      {style definitions}  
        tbody      {style definitions}          See Sec. B.2 for CSS  
        tfoot      {style definitions}  
  
    </style>  
  
</head>  
  
<body>  
  
    <table>  
  
        <thead>  
  
            <tr>  
                .  
                .  
                .  
            </tr>  
  
        </thead>  
  
        <tbody>  
  
            <tr>  
                .  
                .  
                .  
            </tr>  
  
        </tbody>  
  
        <tfoot>  
  
            <tr>  
                .  
                .  
                .  
            </tr>  
  
        </tfoot>  
  
    </table>  
  
</body>
```

B.1.14 Frames and frameset

Script

```
<!DOCTYPE html
PUBLIC "-//W3C//DTD XHTML 1.0 Frameset//EN"
"http://www.w3.org/TR/xhtml1/DTD/xhtml1-frameset.dtd">
```

Script

```
<frameset cols="..., ..., ...%
           rows="..., ..., ...%">
</frameset>

<frame src="xxxxxx.html" />
<frame src="xxxxxx.html" />
<frame src="..//xxxxx/xxxxxx.html"
       noresize />

<noframes>
  Sorry, your browser does not handle frames!
</noframes>

</frameset>
```

Inline frame

```
<iframe src ="xxxxxx.html"
        height="the height of this inline frame"
        width="the width of this inline frame"
        >

<p> Sorry, your browser does not handle iframe! </p>

</iframe>
```

B.1.15 Characters and symbols

Reserved characters in HTML

&	&	(ampersand)
<	<	(less than)
>	>	(greater than)
'	'	(apostrophe, does not work in IE)
"	"	(quotation mark)

ISO 8859-1 symbols

&nbsp	(non-breaking space)
----------	----------------------

Detailed lists of the ISO 8859-1 symbols, the ISO 8859-1 characters as well as the math symbols, Greek letters and other entities supported by HTML can be found in Ref. [1].

B.2 CSS (Cascading Style Sheets)

B.2.1 Comments

Script

```
/* Comment line */  
  
/*  
 Some comments ...  
 .  
 .  
 .  
 */
```

See Secs. B.1.3, B.3.2, and B.5.2 for comments in HTML, JavaScript, and PHP, respectively.

B.2.2 Three ways for inserting CSS

External style sheet

```
<head>

  <link rel="stylesheet" type="text/css"
        href="folder of the css file/name of the css file.css" />

</head>
```

See Secs. B.2.3 and B.2.4

Internal style sheet

```
<head>

  <style type="text/css">
    .
    .
    .
  </style>

</head>
```

See Secs. B.2.3 and B.2.4

Inline style

```
<body>

  <tag style="style declaration" (/)>
    Some text ...
  (</tag>)

  <span style="style declaration">
    Some text ...
  </span>

</body>
```

See Sec. B.2.4

B.2.3 Four forms for defining styles

Forms for style declaration (class/id/attribute selectors)

```
<style type="text/css">

    tag(, tag2, tag3, ...)          {style declaration}

    .general class                 {style declaration}
    tag.specified class           {style declaration}

    #specified id                  {style declaration} See Sec. B.2.4

    [(user-defined) attribute]     {style declaration}
    tag [attribute]                {style declaration}

</style>
```

Examples

```
<style type="text/css">

    h1                      {style declaration for the "h1" tag}
    h2, h3                  {style declaration for both the "h2" and "h3" tags}

    .en                     {style declaration for the "en" class}
    input.data              {style declaration for the "data" class of the "input" tag}

    #main_title             {style declaration for the tag with the id of "main_title"}

    [id]                    {style declaration for all tags with the "id" attribute}
    input[type="text"]       {style declaration for the "input" tag with the type of "text"}
    img[class|=result]      {style declaration for the "img" tag with the class of "result"}

</style>
```

Using defined styles

```
<body>

    <tag class="the unique choice of the general/specified class" ()>
        Some text ...
    (</tag>

    <tag id="the specified id of this tag" ()>
        Some text ...
    (</tag>

</body>
```

B.2.4 Syntax for style declaration

Example for an external css file

```
h1      {font-style: italic}
h2, h4  {font-weight: normal}

.en     {font-family: "Times New Roman"}
.en2    {font-family: sans-serif}

h3.en   {font-family: sans-serif; color: red}
h3.en2  {font-family: "Times New Roman"; color: black}
```

Example for the internal style declaration

```
<style type="text/css">

  h2      {color: green}
  h6      {text-align: left; margin-left: 25pt}

</style>
```

More examples for style declaration can be found in Sec. A.1.

Examples for using defined styles (cf. script in Sec. B.1.6)

```
<body class="en">

  <h1> Main Title of the Website </h1>           Style declarations given in Template 65 are needed!

  <h2> Title of the web page </h2>

  <hr />

  <h3 class="en"> Main title of the category </h3>
  <h4> Title of blocks in the category </h4>

  <hr />

  <h5> Title of the section </h5>

  <div style="margin-left: 50pt">

    <h6> Title of the paragraph </h6>

    <p>
      Some sentences ... <br />
      Some sentences ... <br />

      <span class="en2"> Some sentences ... </span>
    </p>

    <hr />

  </div>

</body>
```

Main Title of the Website

Title of the web page

Main title of the category

Title of blocks in the category

Title of the section

Title of the paragraph

Some sentences ...

Some sentences ...

Some sentences ...

Figure 26: Headings with style declarations.

B.2.5 Image handling

Script

```
<style type="text/css">  
  
img {position: left/right/top/bottom;  
      z-index: 1/-1;  
  
      visibility: visible/hidden;  
  
      opacity: 0.5;  
      filter: alpha(opacity = 50)}  
  
</style>
```

1: foreground/-1: background

for Firefox

for Internet Explorer

B.2.6 Frequently used style properties and values

Background

```
background-color  
background-image: url('../xxxxxx/xxxxxx.jpg')  
background-position: left, right, top, bottom, center  
background-repeat: repeat, repeat-x, repeat-y, no-repeat
```

Font

```
font-family: "Times New Roman", Times, serif, sans-serif  
font-weight: bold  
font-style: italic  
font-size
```

Text

```
color  
height  
width  
line-height  
text-align: left, right, center  
vertical-align: top, bottom, middle  
text-indent  
text-decoration: underline, overline, line-through  
  
p:first-letter
```

Margin

```
margin  
margin-left  
margin-right  
margin-top  
margin-bottom
```

Links

```
a:link  
a:visited  
a:hover  
a:active
```

Lists

```
list-style-type: decimal, disc
```

Border

```
border  
border-left  
border-right  
border-top  
border-bottom  
  
border-style: solid, dashed, dotted, double, groove, ridge, inset, outset, hidden, none  
border-color  
border-width
```

Padding

```
padding  
padding-left  
padding-right  
padding-top  
padding-bottom
```

Cursor

```
cursor: default, pointer, progress, wait, text, help, move, crosshair,  
e-resize, w-resize, n-resize, s-resize, ne-resize, nw-resize, se-resize, sw-resize
```

See Sec. B.4.5 for frequently used HTML DOM properties for style declaration.

B.3 JavaScript

B.3.1 Start with JavaScript

Script

```
<script type="text/javascript">

    document.write("some text");

    document.write("some text" + '\single quote\'' + \& + \"double quote\" + \\ + \n);

</script>
```

See Sec. B.5.1 for basic PHP syntax.

B.3.2 Comments

Script

```
<script type="text/javascript">
//  Comment line

/*  Comment line  */

/*
Some comments ...
.
.
.
*/
</script>
```

See Secs. B.1.3, B.2.1, and B.5.2 for comments in HTML, CSS, and PHP, respectively.

B.3.3 Variables

Script

```
<script type="text/javascript">
  var xxx;
  var xxx_xxx;

  var xxx = number;
  var xxx_xxx = "string";

  var xxx = number + xxx;
  var xxx_xxx = "string" + xxx_xxx;
</script>
```

See Sec. B.5.3 for variables in PHP.

B.3.4 Function defining

Script

```
<script type="text/javascript">
    function function_without_variable()
    {
        .
        .
    }

    function function_with_variable(xxx, yyy, ...)
{
    .
    .
}
</script>
```

Examples can be found in Sec. B.4.4.

B.3.5 if

Script

```
<script type="text/javascript">
  if ((xxx      == yyy      &&
       xxx_xxx != yyy_yyy   ) ||
       (condition        ) ||
       (!(condition)      )    )
  {
    .
    .
    .
  }

  else
  if (conditions)
  {
    .
    .
    .
  }

  else
  {
    .
    .
    .
  }
</script>
```

See Sec. B.5.4 for `if`, `else if` and `else` comments in PHP.

Script

```
<script type="text/javascript">
  xxx = (condition) ? yyy : zzz;
</script>
```

B.3.6 switch

Script

```
<script type="text/javascript">
switch (xxx)
{
    case x:
        ....;
        break;

    case y:
        ....;
        break;

    default:
        ....;
}
</script>
```

See Sec. B.5.5 for switch comment in PHP.

B.3.7 for

Script

```
<script type="text/javascript">
  for (xxx = 1; xxx <= xxx_max; xxx++)
  {
    .
    .
    .
  }
</script>
```

Script

```
<script type="text/javascript">
  var yyy = Array()

  yyy[0] = "zzz";
  yyy[1] = "zzz";

  .
  .

  for (xxx in yyy)
  {
    .
    .
    .
  }
</script>
```

See Sec. B.5.6 for `for` and `foreach as` comments in PHP.

B.3.8 while

Script

```
<script type="text/javascript">
  while (conditions)
  {
    .
    .
  }
</script>
```

Script

```
<script type="text/javascript">
  do
  {
    .
    .
  }
  while (conditions);
</script>
```

See Sec. B.5.7 for `while` and `do while` comments in PHP.

B.3.9 Events

Frequently used events

```
<tag onload= "....."
  onunload="....."

  onkeydown= "....."
  onkeypress="....."
  onkeyup= "....."

  onclick= "....."
  ondblclick="....."

  onmouseover="....."    }
  onmouseout= "....."
  onmousemove="....."

  onmousedown="....."
  onmouseup= "....."

(/) >
```

Together!

Examples can be found in Sec. B.4.4.

B.3.10 Frequently used JavaScript methods

`new Date() object`

<code><script type="text/javascript"></code>	
<code>document.write(new Date().getFullYear());</code>	A four digit representation of a year
<code>document.write(new Date().getMonth());</code>	A numeric representation of a month (0 to 11)
<code>document.write(new Date().getDate());</code>	The day of the month (1 to 31)
<code>document.write(new Date().getDay());</code>	A numeric representation of a day of the week (0 to 6)
<code>document.write(new Date().getHours());</code>	24-hour format of an hour (0 to 23)
<code>document.write(new Date().getUTCHours());</code>	24-hour format of an hour, according to universal time
<code>document.write(new Date().getMinutes());</code>	Minutes without leading zeros (0 to 59)
<code>document.write(new Date().getSeconds());</code>	Seconds without leading zeros (0 to 59)
<code></script></code>	

`Math object`

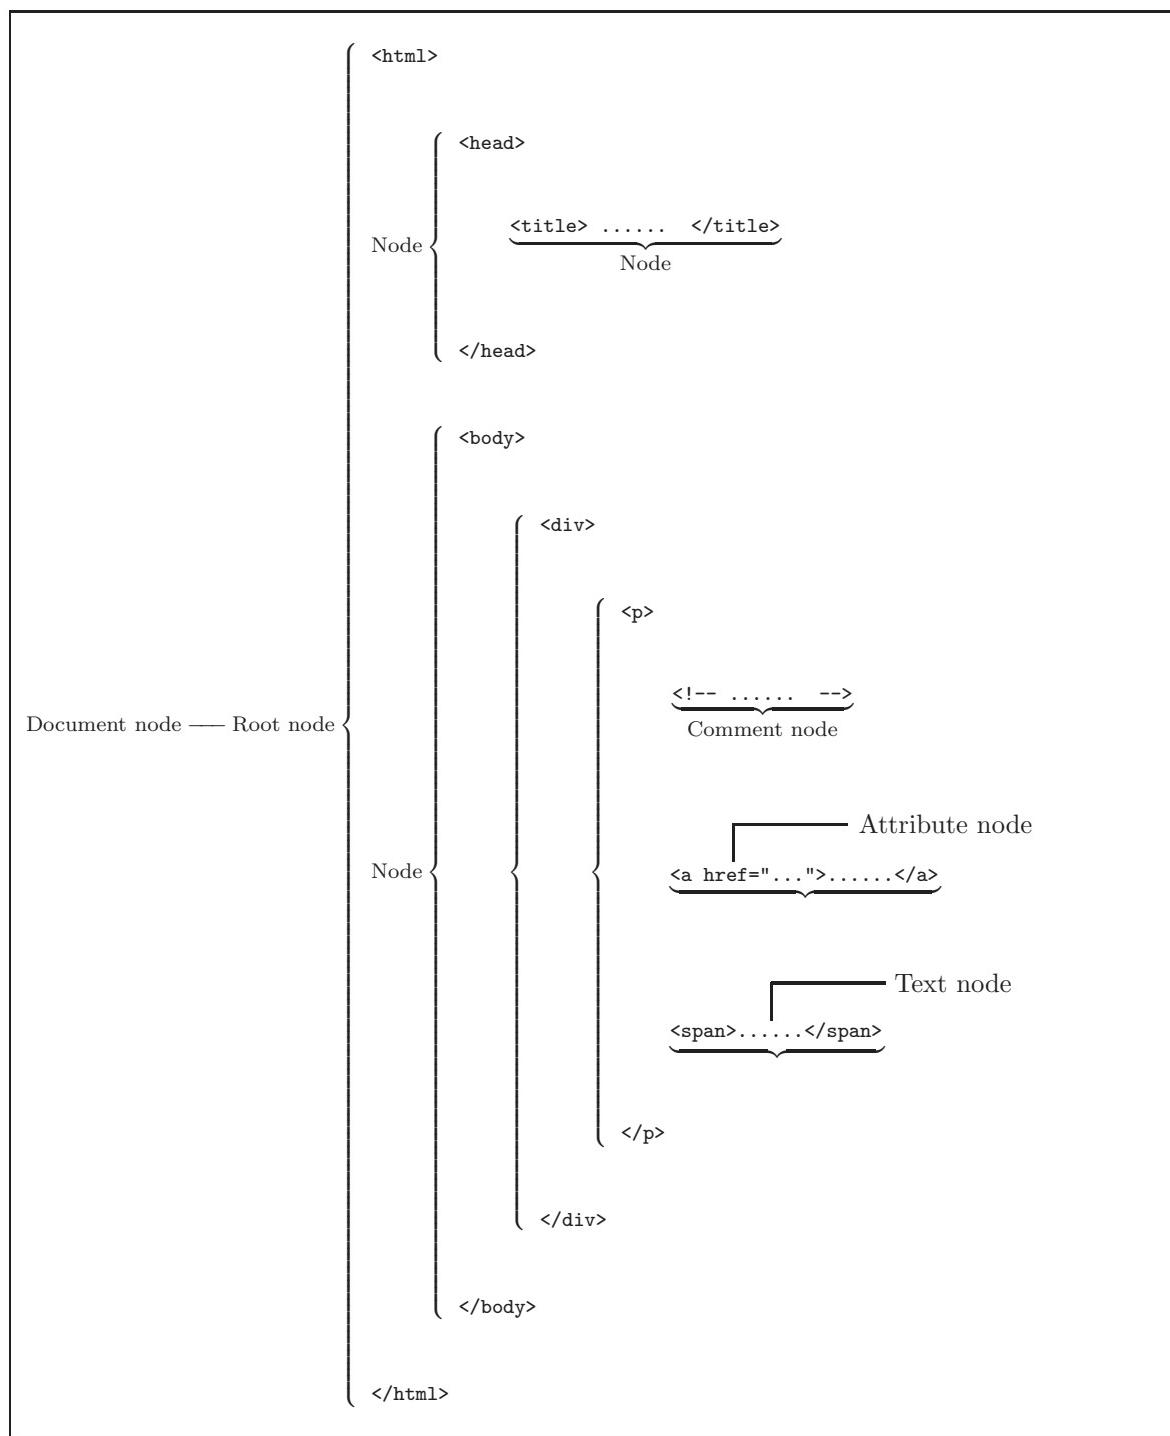

```
Math.abs(), Math.ceil(), Math.floor(), Math.round(), Math.max(), Math.min(),
Math.sin(), Math.cos(), Math.tan(),
Math.asin(), Math.acos(), Math.atan(),
Math.sqrt(), Math.pow(), Math.exp(), Math.log(),
Math.random()
```

See Sec. B.5.12 for frequently used PHP functions.

B.4 HTML DOM (Document Object Model)

B.4.1 Nodes and node tree

Nodes

See Sec. B.1.4 for the basic structure of an HTML document.

B.4.2 Methods

Script

```
<script type="text/javascript">
  node_object.getElementById("specified_id").property
  node_object.getElementByName("specified_name").property
  node_object.getElementsByTagName("specified_tag").property
</script>
```

See Sec. B.4.3 for HTML DOM properties.

B.4.3 Properties

Script

```
<script type="text/javascript">
  node_object.parentNode.property
  node_object.childNodes[number].property

  node_object.firstChild.property
  node_object.lastChild.property

  node_object.previousSibling.property
  node_object.nextSibling.property

  node_object.attributes[number].property

  node_object.nodeName = ".....";
  node_object.nodeType = ".....";
  node_object.nodeValue = ".....";

  node_object.name = ".....";
  node_object.type = ".....";
  node_object.value = ".....";

  node_object.innerHTML = ".....";
</script>
```

Links

```
anchor_node_object.href
anchor_node_object.src
```

input

```
input_node_object.checked = true, false
input_node_object.disabled = true, false
```

B.4.4 Examples

Combined with “events”

```
<input type="radio"
       onmouseover="this.nextSibling.nextSibling.style.color = 'red';
                  this.nextSibling.nextSibling.style.fontWeight = 'bold'"
       onmouseout= "this.nextSibling.nextSibling.style.color = 'black';
                  this.nextSibling.nextSibling.style.fontWeight = 'normal'"
       onclick=   "this.checked = false"
/>
<span> Some text ... </span>
```

Combined with “events” and “functions”

```
<script type="text/javascript">
    function change_color(row_number, item_number, color_user)
    {
        document.getElementById(row_number).childNodes[item_number].style.color = color_user;
    }

    function recover_color(row_number, item_number)
    {
        document.getElementById(row_number).childNodes[item_number].style.color = 'black';
    }
</script>

<table border="1">

    <tr id="row_1">

        <th onmouseover="change_color('row_1', 0, 'red')"
            onmouseout= "recover_color('row_1', 0)"
            cell(1,1)
        </th>

        <th onmouseover="change_color('row_1', 1, 'blue')"
            onmouseout= "recover_color('row_1', 1)"
            cell(1,2)
        </th>

    </tr>

    <tr id="row_2">

        <th onmouseover="change_color('row_2', 0, 'lightgreen')"
            onmouseout= "recover_color('row_2', 0)"
            cell(2,1)
        </th>

        <th onmouseover="change_color('row_2', 1, 'gold')"
            onmouseout= "recover_color('row_2', 1)"
            cell(2,2)
        </th>

    </tr>

</table>
```

More examples can be found in Chap. 3.

B.4.5 Frequently used HTML DOM properties for style declaration

Background

```
style.backgroundColor  
style.backgroundImage = "url('../xxxxxx/xxxxxx.jpg')"  
style.backgroundPosition = "left", "right", "top", "bottom", "center"  
style.backgroundRepeat = "repeat", "repeat-x", "repeat-y", "no-repeat"
```

Font

```
style.fontFamily = "Times New Roman", "Times", "serif", "sans-serif"  
style.fontWeight = "bold"  
style.fontStyle = "italic"  
style.fontSize
```

Text

```
style.color  
style.height  
style.width  
style.lineHeight  
style.textAlign = "left", "right", "center"  
style.verticalAlign = "top", "bottom", "middle"  
style.textIndent  
style.textDecoration = "underline", "overline", "line-through"
```

Margin

```
style.margin  
style.marginLeft  
style.marginRight  
style.marginTop  
style.marginBottom
```

Image

```
style.visibility = "visible", "hidden"  
style.zIndex = "1", "-1"
```

Lists

```
style.listStyleType = "decimal", "disc"
```

Border

```
style.border  
style.borderLeft  
style.borderRight  
style.borderTop  
style.borderBottom  
  
style.borderStyle = "solid", "dashed", "dotted", "double"  
                 "groove", "ridge", "inset", "outset", "hidden", "none"  
style.borderColor  
style.borderWidth
```

Padding

```
style.padding  
style.paddingLeft  
style.paddingRight  
style.paddingTop  
style.paddingBottom
```

Cursor

```
style.cursor = "default", "pointer", "progress", "wait", "text", "help", "move", "crosshair",
    "e-resize", "w-resize", "n-resize", "s-resize",
    "ne-resize", "nw-resize", "se-resize", "sw-resize"
```

See Sec. B.2.6 for frequently used style properties and values in CSS.

B.4.6 Navigator object

Script

```
<script type="text/javascript">
  if (navigator.appName == "Microsoft Internet Explorer")
  {
    .
    .
    .

  }
  else
  if (navigator.userAgent.search("Netscape") != -1 ||
      navigator.userAgent.search("Firefox" ) != -1 ||
      navigator.userAgent.search("Safari"   ) != -1   )
  {
    .
    .
    .

  }
</script>
```

B.4.7 Location object

Script

```
<script type="text/javascript">
  if (navigator.appName == "Microsoft Internet Explorer")
  {
    window.location = "#specified_id";
  }
</script>

<h3 id="specified_id> Main title of the catagory </h3>

<script type="text/javascript">
  if (navigator.userAgent.search("Firefox") != -1 ||
      navigator.userAgent.search("Safari" ) != -1 )
  {
    window.location = "#specified_id";
  }
</script>

  .
  .
  .

<script type="text/javascript">
  if (navigator.userAgent.search("Netscape") != -1)
  {
    window.location.hash = "#specified_id";
  }
</script>
```

Methods

```
reload(), replace("new_url")
```

B.5 PHP (PHP: Hypertext Preprocessor)

B.5.1 Start with PHP

Script

```
<?php  
  
echo "some text";  
  
echo "some text" . "'single quote'" . '"double quote"' . '\r\n';  
  
?>
```

See Sec. B.3.1 for basic JavaScript syntax.

B.5.2 Comments

Script

```
<?php  
// Comment line  
  
/* Comment line */  
  
/*  
Some comments ...  
. . .  
*/  
?>
```

See Secs. B.1.3, B.2.1, and B.3.2 for comments in HTML, CSS, and JavaScript, respectively.

B.5.3 Variables

Script

```
<?php  
    $xxx = number;  
    $xxx_xxx = "string";  
  
    $xxx[$yyy] = number;  
    $xxx_xxx[$yyy] = "string";  
  
    $xxx = number + $xxx;  
    $xxx_xxx = "string" . $xxx_xxx;  
?>
```

See Sec. B.3.3 for variables in JavaScript.

B.5.4 if

Script

```
<?php
if (($xxx      == $yyy      &&
     $xxx_xxx != $yyy_yyy    ) || 
     (condition          ) || 
     (!condition         )    )
{
.
.
.
}

elseif (conditions)
{
.
.
.

}

else
{
.
.
.

}
?>
```

See Sec. B.3.5 for `if`, `else if` and `else` comments in JavaScript.

B.5.5 switch

Script

```
<?php
switch ($xxx)
{
    case x:
        ....;
        break;

    case y:
        ....;
        break;

    default:
        ....;
}
?>
```

See Sec. B.3.6 for switch comment in JavaScript.

B.5.6 for

Script

```
<?php
    for ($xxx = 1; $xxx <= $xxx_max; $xxx++)
    {
        .
        .
        .
    }
?>
```

Script

```
<?php
    $yyy = array("zzz", "zzz", ...);

    foreach ($yyy as $value)
    {
        .
        .
        .
    }
?>
```

See Sec. B.3.7 for `for` and `for in` comments in JavaScript.

B.5.7 while

Script

```
<?php
    while (conditions)
    {
        .
        .
        .
    }
?>
```

Script

```
<?php
    do
    {
        .
        .
        .
    }
    while (conditions);
?>
```

See Sec. B.3.8 for `while` and `do while` comments in JavaScript.

B.5.8 form

Script

```
<form action="login_check.php"
      method="post/get"
      enctype="multipart/form-data">

<fieldset>

    <legend> Login </legend>

    <input type="text"      name="user_name"      /> <br/>
    <input type="password" name="user_password" /> <br/>

</fieldset>

    .
    .
    .

<input type="submit" name="submit" value="Submit" />
<br />

</form>
```

login_check.php

```
<?php
    $user_name      = $_POST["user_name"];
    $user_password = $_POST["user_password"];
?>
```

Modification

```
<?php
    $xxx = $_Get["xxx"];
    $yyy = $_Get["yyy"];
?>
```

B.5.9 File handling

Script

```
<?php
$data_input = fopen("data.txt", "r");

do
{
    .
    .
    .

}
while (!feof($data_input));

fclose($data_input);

.
.

$result_output = fopen("result.txt", "w/a");

.
.

fclose($result_output);
?>
```

Frequently used functions for file handling

```
fopen(), fclose(),
fputs(), fscanf(),
file_exists(), feof(),
link(), unlink(), copy(),
move_uploaded_file(),
mkdir(), rmdir()
```

See Sec. B.5.10 for more details about the `move_uploaded_file()` function.

B.5.10 File uploading

Script

```
<form action="get_file.php"
      method="post"
      enctype="multipart/form-data">

<fieldset>

    <legend> File uploading </legend>

    <input type="file" name="uploaded_file" /> <br />

</fieldset>

.

.

<input type="submit" name="submit" value="Submit" />
<br />

</form>
```

get_file.php

```
<?php
move_uploaded_file($_FILES["uploaded_file"]["tmp_name"],
                   "folder_name/" . $_FILES["uploaded_file"]["name"]);

if (file_exists("folder_name/" . $_FILES["uploaded_file"]["name"]))
{
    if ($_FILES["uploaded_file"]["type"] = "image/jpeg")
    {
        .

        .

    }

    if ($_FILES["uploaded_file"]["size"] > 20000)
    {
        .

        .

    }
}

?>
```

More examples for file uploading and handling can be found in Chap. 2.

B.5.11 E-mail sending

Script

```
<?php
    mail(e-mail address of a receiver,
        subject of this e-mail,
        message of this e-mail,
        'From: xxxxxx@xxxxxx.xxx.xx' . "\r\n".
        'Cc:      yyyy@yyyyy.yyy.yy' . "\r\n".
        'Bcc:     zzzzzz@zzzzzz.zzz.zz',
        an additional parameter (optional));
?>
```

See Sec. B.1.8 for e-mail sending with an <a> tag in HTML.

Example

```
<?php
if ($_POST["confirm_email"] == "yes")
{
    mail($_POST["new_participant_email_address"],

        '[Auto submission] Registration confirmation',

        'Dear ' . $_POST["new_participant_title"] . ', ' .
        $_POST["new_participant_surname"] . ', ' . "\r\n" .
        "\r\n" .

        'Herewith we would be glad to confirm ' .
        'your registration by ..... ' .
        'with the following personal information:' . "\r\n" .
        "\r\n" .

        'Title: ' . $_POST["new_participant_title"] . "\r\n" .
        'Surname: ' . $_POST["new_participant_surname"] . "\r\n" .
        'Name: ' . $_POST["new_participant_name"] . "\r\n" .

        .
        .
        .

        'Thank you very much for your registration.' .
        'Should you have any questions,' .
        'please don\'t hesitate to contact us.' . "\r\n" .
        "\r\n" .

        'We are looking forward to seeing you.' . "\r\n" .
        "\r\n" .

        'Sincerely yours,' . "\r\n" .
        "\r\n" .
        "\r\n" .

        'The organization committee' . "\r\n" .
        "\r\n" ,

        'From: xxxxxx@xxxxxx.xxx.xx' . "\r\n" .
        'Cc:      yyyy@yyyyy.yyy.yy' . "\r\n" .
        'Bcc:     zzzzzz@zzzzzz.zzz.zz' );
}
```

B.5.12 Frequently used functions

String

```
printf(), fprintf(), sprintf()
```

Date and time

```
<?php
echo gmdate(Y);      A four digit representation of a year
echo gmdate(y);      A two digit representation of a year

echo gmdate(m);      A numeric representation of a month (01 to 12)
echo gmdate(n);      A numeric representation of a month without leading zeros (1 to 12)
echo gmdate(F);      A full textual representation of a month
echo gmdate(M);      A short textual representation of a month (three letters)

echo gmdate(z);      The day of the year (0 to 365)
echo gmdate(d);      The day of the month (01 to 31)
echo gmdate(j);      The day of the month without leading zeros (1 to 31)
echo gmdate(l);      A full textual representation of a day of the week (lowercase 'L')
echo gmdate(D);      A textual representation of a day of the week (three letters)

echo gmdate(A);      Uppercase AM or PM
echo gmdate(a);      Lowercase am or pm

echo gmdate(H);      24-hour format of an hour (00 to 23)
echo gmdate(G);      24-hour format of an hour (0 to 23)
echo gmdate(h);      12-hour format of an hour (01 to 12)
echo gmdate(g);      12-hour format of an hour (1 to 12)

echo gmdate(i);      Minutes with leading zeros (00 to 59)
echo gmdate(s);      Seconds with leading zeros (00 to 59)
?>
```

Math

```
abs(), ceil(), floor(), round(), max(), min(),
sin(), cos(), tan(), sinh(), cosh(), tanh(),
asin(), acos(), atan(), asinh(), acosh(), atanh(),
sqrt(), pow(), exp(), log(), log10(),
rand()
```

File including

```
<?php
include("folder_name/full_file_name_with_the_extension");
?>
```

Shell commands

```
<?php
shell_exec("a shell command");
?>
```

See Sec. B.3.10 for frequently used JavaScript methods.

B.6 Colors

In this section I list some most frequently used colors (in my opinion) for building a web page. Note that the W3C HTML and CSS standards have listed only 16 valid color names: aqua, black, blue, fuchsia, gray, green, lime, maroon, navy, olive, purple, red, silver, teal, white, and yellow; other colors have to be defined with their HEX values.

B.6.1 Red series

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
red	red		#FF0000	{1 ,0 ,0 }
darkred	darkred		#8B0000	{0.55,0 ,0 }
orange	orange		#FFA500	{1 ,0.65,0 }
orangered	orangered		#FF4500	{1 ,0.27,0 }
salmon	salmon		#FA8072	{0.98,0.5 ,0.45}
coral	coral		#FF7F50	{1 ,0.5 ,0.31}
tomato	tomato		#FF6347	{1 ,0.39,0.28}
hotpink	hotpink		#FF69B4	{1 ,0.41,0.71}
deeppink	deeppink		#FF1493	{1 ,0.08,0.58}
crimson	crimson		#DC143C	{0.86,0.08,0.24}
chocolate	chocolate		#D2691E	{0.82,0.41,0.12}
firebrick	firebrick		#B22222	{0.7 ,0.13,0.13}
brown	brown		#A52A2A	{0.65,0.16,0.16}

B.6.2 Green series

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
green	green		#008000	{0 ,0.5 ,0 }
darkgreen	darkgreen		#006400	{0 ,0.39,0 }
lime	lime		#00FF00	{0 ,1 ,0 }
limegreen	limegreen		#32CD32	{0.2 ,0.8 ,0.2 }
forestgreen	forestgreen		#228B22	{0.13,0.55,0.13}
lightgreen	lightgreen		#90EE90	{0.56,0.93,0.56}
springgreen	springgreen		#00FF7F	{0 ,1 ,0.5 }
greenyellow	greenyellow		#ADFF2F	{0.68,1 ,0.18}
lawngreen	lawngreen		#7CFC00	{0.49,0.99,0 }
yellowgreen	yellowgreen		#9ACD32	{0.6 ,0.8 ,0.2 }
olive	olive		#808000	{0.5 ,0.5 ,0 }

B.6.3 Blue series

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
blue	blue		#0000FF	{0 ,0 ,1 }
darkblue	darkblue		#00008B	{0 ,0 ,0.55}
cyan	cyan		#00FFFF	{0 ,1 ,1 }
darkcyan	darkcyan		#008B8B	{0 ,0.55,0.55}
skyblue	skyblue		#87CEEB	{0.53,0.81,0.92}
slateblue	slateblue		#6A5ACD	{0.42,0.35,0.8 }
royalblue	royalblue		#4169E1	{0.25,0.41,0.88}

B.6.4 Violet series

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
plum	plum		#DDA0DD	{0.87, 0.63, 0.87}
violet	violet		#EE82EE	{0.93, 0.51, 0.93}
magenta	magenta		#FF00FF	{1, 0, 1}
mediumpurple	mediumpurple		#9370D8	{0.58, 0.44, 0.85}
blueviolet	blueviolet		#8A2BE2	{0.54, 0.17, 0.89}
darkviolet	darkviolet		#9400D3	{0.58, 0, 0.83}
purple	purple		#800080	{0.5, 0, 0.5}

B.6.5 Yellow series

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
yellow	yellow		#FFFF00	{1, 1, 0}
gold	gold		#FFD700	{1, 0.84, 0}
goldenrod	goldenrod		#DAA520	{0.85, 0.65, 0.13}
darkgoldenrod	darkgoldenrod		#B8860B	{0.72, 0.53, 0.04}

B.6.6 White-black series

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
white			#FFFFFF	{1 ,1 ,1 }
gainsboro	gainsboro		#DCDCDC	{0.86,0.86,0.86}
silver	silver		#COCOCO	{0.75,0.75,0.75}
gray	gray		#808080	{0.5 ,0.5 ,0.5 }
grey	grey		#808080	{0.5 ,0.5 ,0.5 }
dimgray	dimgray		#696969	{0.41,0.41,0.41}
dimgrey	dimgrey		#696969	{0.41,0.41,0.41}
darkgray	darkgray		#404040	{0.25,0.25,0.25}
darkgrey	darkgrey		#404040	{0.25,0.25,0.25}
black	black		#000000	{0 ,0 ,0 }

B.6.7 Non-white backgrounds

Definitions

Name	In text	In background	HEX value	rgb value {r, g, b}
peachpuff	peachpuff		#FFDAB9	{1 ,0.85,0.73}
navajowhite	navajowhite		#FFDEAD	{1 ,0.87,0.68}
pink	pink		#FFC0CB	{1 ,0.75,0.80}
wheat	wheat		#F5DEB3	{0.96,0.87,0.70}

Acknowledgments

The author would like to thank the friendly hospitality of the Institut für Physik, Humboldt-Universität zu Berlin where part of this work was completed. This work was partially supported by the National Science Council of R.O.C. under contract no. NSC-98-2811-M-006-044, by the National Center of Theoretical Sciences, R.O.C. as well as by the Department of Physics, National Cheng Kung University, Taiwan.
